

PROGRESSIVE PPE PILING & ENGINEERING

Here at Progressive Piling and Engineering, we take pride in our work and treat your project as if it were our own. Our client's notice this by the workmanship that we provide, but it all starts with the materials that we use. That is why we have chosen to become a Mangum Certified installer. Magnum has been designing deep foundation solutions for over 35 years, and have been used in over a million projects! They are the go-to material for numerous engineers across the country. Their material separates itself from other manufacturers because it is 100% NEW US ASTM A513 steel, built specifically for structural applications and backed by a ten (10) year warranty. Helical piles are less invasive, able to be utilized for sites with limited access, more economical, and keep your project on schedule. We don't believe in a "one size fits all" approach because, let's face it, all projects are not the same. Our partnership with Magnum gives us the capabilities to choose the correct helical pile and cap design for your projects. Let Progressive and Magnum provide the best foundation solution for you.

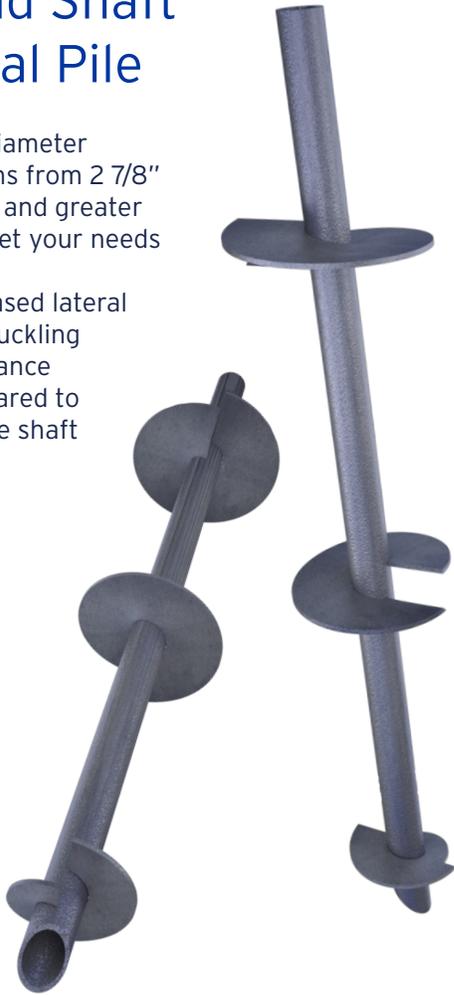

Patented Dual Cutting Edge (or DCE) cuts through cobble and dense soils

MAGNUM
P I E R I N G

Round Shaft Helical Pile

- Pile diameter options from 2 7/8" to 13" and greater to meet your needs
- Increased lateral and buckling resistance compared to square shaft

Square Shaft Helical Pile

- Round corner square shaft solid steel
- Available in 1.5" and 1.75" shaft sizes

Bearing Plate Cap

- Multiple plate dimensions manufactured
- Designed for embedment in cast-in place reinforced concrete
